

The vision of the Municipality of Vlore Living Lab is to contribute to climate change adaptation in the local fisheries sector by strengthening the environmental, social, and economic resilience of coastal communities.

In the long term, the Living Lab aims to consolidate itself as a permanent space for participatory governance, where scientific knowledge, the experience of local stakeholders, and public policies are integrated to support informed decision-making and the design of climate solutions tailored to the territorial context.

Scope

The scope of the Living Lab focuses on the fisheries sector within the Municipality of Vlore, including both small-scale fisheries and activities associated with its value chain.

In particular, the Living Lab will address:

- the impacts of climate change on fishery resources and marine ecosystems
- the vulnerability of fishers and coastal communities
- and the interactions between fisheries, the environment, the market, and local governance

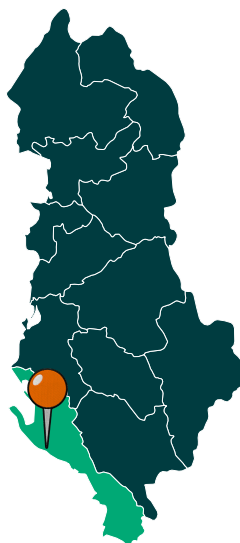

The territorial scope of the Living Lab encompasses the coastal and marine areas of the Municipality of Vlore, with particular attention to areas where fishing activity is key to local livelihoods.

Organisation: Vlore Municipality

Sector: Fisheries

Location: Vlore, Albania
