FARCLIMATE

MOVING FORWARD TO ACHIEVING CLIMATE-RESILIENT AND SUSTAINABLE
EUROPEAN REGIONAL ECONOMIC SYSTEMS

Welcome to FARCLIMATE's 5th Newsletter!

Since our last newsletter, **FARCLIMATE** has continued to turn climate adaptation into action, connecting research with communities, local stakeholders and new opportunities for collaboration across Europe.

During this period, the project strengthened its engagement beyond the consortium. From sharing **FARCLIMATE's** experience at the **CEI Study Visit 2026 in Sofia** to working closely with **GALP Ría de Arousa**, these activities created valuable spaces to exchange knowledge, explore local climate challenges and build connections that can support more resilient territories.

In Galicia, this commitment also reached younger generations through a series of activities with **IES Johan Carballeira in Bueu**. Students moved from the classroom to fieldwork at Pescadoira Beach and finally to the Talent for Change Festival, bringing climate awareness and local action closer together.

In this newsletter, discover these stories alongside new training resources, articles and opportunities to keep learning with **FARCLIMATE** as we continue connecting people, knowledge and action for climate resilience.

FARCLIMATE in Sofia, Bulgaria.

Building Skills for Climate-Resilient Future

On 6–7 July, **FARCLIMATE** took part in the **CEI Study Visit 2026-1 in Sofia, Bulgaria**, an initiative promoted by the European Commission to explore the skills and competencies needed to support Europe's green and digital transitions.

Representing **FARCLIMATE**, **Loli Docampo Diéguez** joined the **#Spotlight sessions**, where she presented the project's initiatives and exchanged experiences with international experts on how people and organisations can better prepare for the challenges posed by climate change.

The visit provided a valuable opportunity to share **FARCLIMATE**'s approach while learning from other experiences and perspectives. These exchanges help create new connections, strengthen collaboration and bring different communities together around a shared goal: building more resilient and sustainable territories.

A special thanks to **New Bulgarian University** and the **Community for Educational Innovation (CEI)** for creating a space for knowledge exchange, dialogue and new ideas.

Connecting with local actors: FARCLIMATE meets GALP Ría de Arousa

As part of its work to strengthen climate resilience in coastal communities, **FARCLIMATE** met with **GALP Ría de Arousa** to exchange perspectives on the challenges facing the local fisheries sector and explore opportunities for collaboration.

The meeting provided a valuable space to connect the project's research with the experience and knowledge of actors working directly in the territory. Discussions focused on understanding local needs, sharing perspectives and identifying areas where cooperation can contribute to more effective climate adaptation strategies.

xvbx

Engaging organisations such as GALP Ría de Arousa is essential to ensure that solutions respond to real territorial challenges. By bringing research and local expertise together, **FARCLIMATE** continues to strengthen the connections needed to support resilient and sustainable coastal communities.

From dialogue to field:

A practical session at Compostela Beach

In November 2025, the **FARCLIMATE** consortium gathered in Lisbon for the 3rd General Assembly. Partners reviewed the progress achieved across the project and discussed the next steps linked to the current status of each Work Package. The meeting helped reinforce coordination, align priorities and maintain a shared direction for the months ahead.

Teenagers taking climate action:

A two-day experience in Bueu

Day 1: Exploring Local Challenges at Pescadoira Beach

Students from **IES Johan Carballeira** took their climate learning beyond the classroom through fieldwork at the beautiful **Pescadoira Beach**. The activity brought them directly into their local coastal environment, allowing them to explore environmental challenges first-hand and connect the knowledge developed during previous sessions with real conditions on the ground.

Day 2: Bringing Climate Action to the Community

The experience continued the following day at the **Talent for Change Festival**, where students brought their work closer to the wider community. The event gave them an opportunity to share what they had learned, raise awareness about local environmental challenges and demonstrate how young people can become active participants in building a more resilient future.

Reflecting on Climate Action: Closing the FARCLIMATE journey in Bueu

Following the activities at **Pescadoira Beach** and the **Talent for Change Festival**, **FARCLIMATE** returned to **IES Johan Carballeira** for a final session with the students who had taken part in this educational journey.

The session provided an opportunity to look back at the work carried out throughout the different activities, reflect on the experience and discuss what students had learned about climate change, local environmental challenges and the role communities can play in responding to them.

More than simply marking the end of the programme, the final session helped bring together the different stages of the experience — from classroom learning and preparation to fieldwork and community engagement.

Through this process, **FARCLIMATE** brought climate adaptation closer to younger generations, encouraging students to connect global climate challenges with their own territory and recognise the value of local participation in building more resilient communities.

Learning how to adapt to climate change starts with having access to the right knowledge. That is why **FARCLIMATE** has continued improving its **Training Platform**, making it easier to explore educational resources and learn more about climate resilience and adaptation.

The platform brings together training materials covering the three main sectors addressed by the project — **agriculture, forestry and fisheries** — alongside cross-cutting topics that help users better understand the challenges and solutions shaping climate adaptation across Europe.

From **Living Labs** and **Nature-Based Solutions** to **Life Cycle Assessment**, **climate impacts and adaptation strategies**, the platform provides an accessible way for researchers, practitioners, students, policymakers and anyone interested in climate resilience to expand their knowledge.

Visit the **FARCLIMATE** Training Platform, explore the available trainings and discover practical knowledge that can help us better understand and prepare for a changing climate.
